

Learn More About Blue Dream

Blue Dream is a sativa-dominant hybrid marijuana strain made by crossing Blueberry with Haze. This strain produces a balanced high, along with effects such as cerebral stimulation and full-body relaxation. Blue dream is high THC but has a low CBD percentage, making this potent strain a fan favorite of both novice and veteran cannabis consumers. In terms of flavor, Blue Dream is reported to smell and taste like sweet berries. Medical marijuana patients often use Blue Dream to treat symptoms of depression, chronic pain, and nausea. According to home grow enthusiasts, this strain has an average flowering time of 67 days and is best suited to grow using the Sea of Green method. Blue Dream originated in California and has since achieved legendary status among West Coast strains and has quickly become one of the most-searched-for strains in the Leafly database. Strains similar to Blue Dream include Blue Dream CBD, Double Dream, and Blue Magoo.
