

Sativa Dominate Hybrid

Learn More About Poison Pine

Poison Pine comes to us from the breeders CSI Humboldt. It is a cross between Durban Poison and '79 Xmas Bud. Both genetics are older, dating back to the 70's, bringing you on a trip back down memory lane.

Durban Poison is a sativa dominant strain from South Africa. Is known for its large chunky buds and small structure. It has an earthy smell with hints of fennel, orange spice and lemon. Some describe it as a spicy citrus peppermint, especially when smoked. '79 Xmas Bud is a plant that lives up to its name. It is a Pakistani landrace named for its christmas tree like aroma. Has piney, earthy, and citrus notes. Usually very small, old school looking buds.

But when crossed you get the best of both plants. A nice small plant that will produce medium/large buds and an aroma that will overtake your nose. Very pin-e-y, christmas tree with earthy, citrus and spicy undertones. Standing next to this plant will make you think you are outside in a forest. If you are looking to take a trip back in time, than this is the flower for you. A truly unique cultivar that we are happy to have.
