

## Learn More About Blue Dream

Blue Dream is a sativa-dominant hybrid created by Select Genetics. This is a back cross of Green Crack, so the lineage is Blue Dream x Green Crack x Blue Dream.

Blue Dream itself is a cross between Blueberry x Haze. It is a sativa-dominant strain known for its stellar flavor and cerebral high. Blue Dream first made a name for itself in the medical community in California, although not many people are sure who first created it. It eventually caught the attention of breeder DJ Short, who worked hard to give us the version we have today. Green Crack's origins are disputed, it is descended from the ever-popular Skunk #1, but it may also have some Afghani landrace in its background. It provides the best of what a sativa strains offer. It is a great strain to help appreciate your surroundings or as a way to get up and go. Even the more experienced cannabis users will say, a little goes a long way with this sativa.

Blue Dream x Green Crack gives off the best of both. You get a nice sweet haze, think bubblegum and black pepper from the Blue Dream, and some earthiness and spicy notes from the Green Crack. Smooth on the inhale and exhale this Blue Dream will have you up and enjoying your day.
