

Poison Mints

Learn more about Poison Mint's

HYBRID

Get ready to elevate your cannabis experience with Poison Mints, the inaugural hybrid strain from Lazy River Genetics! This remarkable cross between Poison Pine and Jelly Mints has been meticulously bred in-house to bring you a one-of-a-kind flavor profile, potency, and effects.

The Story Behind the Strain:

Poison Pine, a cherished LRP cultivar, offers a nostalgic blend of piney, spicy, and citrusy notes, reminiscent of a Christmas tree. Its dense buds and classic “old school” vibe make it a longtime favorite. On the flip side, Jelly Mints, bred by Seed Junky, brings together Kush Mints and Jealousy, creating a minty, gassy profile with hints of sweet orange candy.

These two powerhouses merge to create Poison Mints, a hybrid that delivers a balance of pine, mint, and sweet gas. Expect an initial burst of wintergreen gum on the first sniff, followed by a more complex blend as you break into the buds. The strain is dominated by Limonene, Beta-Myrcene, and Beta-Caryophyllene, contributing to its refreshing citrus, earthy, and slightly spicy aroma. Combined with its big, dense buds, Poison Mints stands out in every way.

About Lazy River Genetics:

At Lazy River Genetics, we're passionate about creating unique, high-quality strains through our in-house breeding program. Poison Mints exemplifies our dedication to producing exceptional hybrids with rich flavors and effects. With the dominant terpenes enhancing the experience, this strain is perfect for those seeking a balance of euphoria and relaxation.

We're excited to introduce Poison Mints and invite you to discover its pine-mint-gas blend firsthand. Unwrap the magic of our very first hybrid from Lazy River Genetics—where terpenes and flavors collide for a memorable journey!
